**Batch #12 / iOS Class**

Remote Learning Assignment - Week 3

_____

Please implement the UI design below. This is a simple log-in and sign-up page.
1. Only consider iPhone XR screen size when implementing this app.
2. Here're the UI requirements and the distance mentioned below are using pixel as unit

- **AppWorks School** label : top 80 to status bar, horizontally center in super view. Font size 40.0
- **Segmented Control** : top 70 to AppWorks label, width 150, horizontally center in super view.
- **Gray View** : width 255, height 125, top 40 to segmented control, horizontally center in super view.
- **Button :** width 235, height: 30, top 50 to gray view, horizontally center in super view.

Log in   Sign up

3. Functional requirements:

- When users switch to the login page through segmented control, the check label and text field should change color and disable. Vice versa.
- When users touch the button, the app should execute log-in or sign-up flow, depending on the index of segmented control.

Batch #12 / iOS Class

Remote Learning Assignment - Week 3

- If there is no valid text, you should show relative alert to users. Including empty input or wrong input.
- In the log in method, we only accept the account as 'appworks_school@gmail.com' , password as '1234'. Otherwise is invalid info.
- In sign up method, the account is always valid except empty input. It's valid when the password is equal to the check text, otherwise is invalid.
